

*4G/LTE Cellular-Enabled*

**BrightLine IT-4G™**

**Mobile Equine DataCenter™**

*"The functionality of the IT-4G, its small size and weight, great battery life, and fast 4G cloud communications will redefine mobile equine medicine."*

Craig T. Roberts, DVM

## BE CONNECTED

- SEND YOUR DATA TO THE CLOUD THROUGH WIRED/WI-FI & GLOBAL CELLULAR INTERNET
- CONNECT TO YOUR CLINIC THROUGH SECURE VPN (VIRTUAL PRIVATE NETWORK)
- ENGAGE TEAM MEMBERS FROM ANYWHERE - IN REAL TIME
- MANAGE CONFIGURATION FROM THE CLOUD
- SERVES AS YOUR DICOM PACS; SUPPORTS ALL MODALITIES
- DICOM VIEWER STREAMS TO ANY LAPTOP OR TABLET, MAC OR PC
- 5 YEAR LIMITED WARRANTY
- SMALL SIZE: 7X9X13 (WDH); <10LBS.

## ON THE ROAD—ANYWHERE

Getting your work completed and communicated efficiently drives profitability. Our IT-4G manages workflow and communicates results. The IT-4G receives your studies and immediately uploads them to the cloud for sharing or archiving. With its included battery pack, the IT-4G can keep you connected while driving to your next appointment, or heading home for dinner - on time.

The IT-4G's flexible internet connections include wired, wireless or cellular; in any combination. A simple configuration application helps manage your network connections.

## GLOBAL CELLULAR CONNECTIVITY

IT-4G comes pre-loaded with both Verizon and AT&T SIM cards installed for domestic use\*\*. Have your own data plan? Just insert your SIM card and go. We can also provide support for use when traveling outside the US.

## POWER TO GO

The IT-4G includes a high capacity Li-Ion battery power source and AC adapter for up to 7 hours of battery use while driving, at the exam site, at lunch, wherever you go. Recharges when plugged into standard AC outlet, while continuing to power the IT-4G. Optional additional batteries available for those really long days.

\*\* Requires separate data plan, or use your own

# Today's equine business requires maximum efficiency in workflow and communications.

BrightLine's IT-4G patented technology drives your success with streamlined workflow and communications, engaging team members and clients through real-time, high-performance, cloud-based data sharing and collaboration.

## IMMEDIATE LOCAL IMAGING REVIEW

Study review can start stall-side using the built-in, universal, all-modality streaming DICOM viewer and your laptop or tablet. Custom viewer preferences can be saved for each user. The high-performance viewer can display a typical 36+ image prepurchase exam in under 2 seconds, and supports efficient navigation and exploration of any image. Tag key images, add notes, etc. Use any Windows or MAC device and browser.

## EMERGENCY REMOTE CONSULT

With secure log-in *directly* to the IT-4G, the internal viewer allows "STAT" cases to be directly streamed to a remote consulting veterinarian while the study uploads to the cloud in the background. "IT" brings the consulting veterinarian virtually stall-side.

## CONNECTING ALL MODALITIES

Our IT-4G platform includes full DICOM 3.x PACS and workflow functions, including flexible study list, query/retrieve, routing and auto-routing to another IT-4G, workstation or PACS system. Supported modalities include DR, Ultrasound, CR, CT, MRI, scintigraphy, etc. Studies, once received by the IT-4G, are immediately uploaded to the cloud using next-generation high-speed XDS\* protocol.

## CIRCLE-of-CARE™ CLOUD SERVICES

BrightLine's secure, reliable cloud-based case communication and collaboration service has been designed to cost-effectively handle any size practice, and any user demands, all while meeting the same standards required by the human health care field.

Partnering with IBM® and their world-class SOFTLAYER™ cloud services platform allows us to provide the best experience for our global customer base. Users get unlimited monthly upload capacity, an affordable monthly practice subscription, and a one-time, per-study charge based on study size\*\*\*. We allow unlimited study views using our included browser-based web viewers, delivering significant cost savings over current solutions.

By leveraging the global reach of IBM and their world-wide connected data centers, our Circle-of-Care™ platform delivers consistent user experience. From anywhere. Now.

## COMPANY PROFILE

BrightLine Medical, Inc., headquartered in the heart of Silicon Valley California, is an information technology (IT) infrastructure company developing a broad range of software and hardware products for global markets.

BrightLine brings significant technical and market expertise, broad intellectual property, a respected medical advisory board, including key business and channel partners. BrightLine is extending worldwide interoperability standards to connect any device or data, anywhere, to anyone. At internet speeds.

BrightLine's products and services leverage our scalable Circle-of-Care™ medical-standards XDS\* Registry/Repository. Hosted by IBM's SoftLayer cloud platform, it addresses both the fixed and mobile segments of the market.

BrightLine participates in the human, veterinary, and other specialty fields.

\*See IHE/XDS standards for more information.

## WE DRIVE COLLABORATION

BrightLine's unique Circle-of-Care™ Collaboration platform, available in early 2016, will provide a clean, intuitive, fully integrated workspace for better teamwork around full fidelity data, saving time while improving outcomes.

Our globally-patented PracticeEdge™ technology, upon which the IT-4G is based, allows the integration of modern medical instrumentation securely into the cloud, placing results directly into the patient medical record.

The system can record and display medical imaging data (like DICOM) as well as other records such as written reports, video, photographs, voice dictation, etc. Future data formats will be added as the system expands to include other data generating devices.

IT enables best-practice connectivity using network protocols like secure router functions, VPN, VLAN, private and public Wi-Fi-as-WAN. Local and remote browser-based management are included in our products reducing administration workload.

## BY COLLABORATING

BrightLine Medical has acquired exclusive licenses to the patented IHE/XDS\* platform created by Axon Medical Technologies of Toronto, Canada. Axon's founders are recognized architects and authors in many of the emerging global healthcare and interoperability standards. BrightLine Medical and Axon are engaged in a broad development program to scale the platform to address the needs of multiple global markets.

Key components of the BrightLine Circle-of-Care™ Collaboration Environment, XDS Cloud Services, and PracticeEdge™ technology were developed in close cooperation with Axon.

Together we are revolutionizing modern healthcare delivery.
